

Ashish Soni

Gen AI Data Scientist (3 Years of Experience in LLM, Agents, ML Development, optimization & visualization)
soniashish956@gmail.com | 8236980719 | linkedin

SKILLS

Tools

MYSQL | Power-Bi | LLM | RAG |
Databricks | OCR

Language

Python | R | SQL | DAX Query |
Advance Excel Query

Application Frameworks

Python Flask | R shiny | Streamlit

DATA SCIENCE

Numpy | Pandas | Scikit learn |
Langchain | Tensorflow | NLP |
Agentic AI | Databricks |
Classification | Azure ML | Time
Series Forecasting | Optimization
Modelling

ACHIEVEMENTS

Spot Recognition for ML Model
Development

INTERNSHIPS

DRDO, ISSA

FEA Analysis of Connecting Rod |
JUN'21-AUG.21

NATIONAL THERMAL POWER CORP Power Plant Operations

JULY'21-AUG'21

IIT ROORKEE

Guided Wave Propagation Analysis
MAY'21-JUN'21

SDNX, DELHI

Inflatable Habitat Research Project
for ISRO | JULY'20-DEC'20

EDUCATION

SGSITS INDORE

B.TECH IN INDUSTRIAL ENGINEERING
(MAY 2022)

Indore, Madhya Pradesh
CGPA: 8.32

EXPERIENCE

ADANI AI LABS | GEN AI DATA SCIENTIST

Aug 2022 – Present | Ahmedabad, Gujarat

AI AGENT FOR PROJECT INTELLIGENCE (GENAI & RAG)

- Architected an Enterprise Agentic RAG Ecosystem: Designed a scalable multi-model orchestration layer (routing between GPT-4o, Claude 3.5, Gemini) using FastAPI and LangChain, capable of autonomously decomposing high-level executive intents into granular, context-aware retrieval tasks for precise domain-specific Q&A.
- Engineered High-Concurrency Extraction Agents: Developed a custom Dashboard Generator agent utilizing Python asyncio to execute 15+ parallel semantic searches against a FAISS vector store, reducing dashboard generation latency by 70%.
- Built a Deterministic Data Pipeline & Vector Store: Implemented a robust incremental indexing pipeline on Azure Blob Storage utilizing SHA-256 hashing and ETags to track file changes, integrated with Azure Document Intelligence for layout-aware parsing (OCR) to ensure high-fidelity embedding generation and optimized compute costs.
- Delivered Full-Stack "AI Command Center": Synthesized heterogeneous enterprise data (Financials, MoMs, Jira) into a unified Project Intelligence Dashboard, bridging the gap between raw unstructured data and quantitative decision-making through a custom FastAPI backend and a dynamic, data-driven frontend.

COAL PRICE FORECASTING PRODUCT

- Developed an ensemble learning model (XGBoost, Random Forest) achieving 99.78 % accuracy in predicting future coal prices, also developed Holt winter and Holt winter damped model (exponential smoothing)
- Integrated Natural Language Processing to extract sentiment from news articles on impactful factors (War, Economy, Oil, Coal, Politics) and quantify their influence on coal prices.
- Developed Python Flask and R-Shiny web apps to analyze trends, volatility, and model performance.

DEMAND FORECASTING & INVENTORY OPTIMIZATION

- Conducted Demand forecasting on sourcing, sales and dispatch data to identify supply-demand gaps across the coal supply chain.
- Developed an optimization ML algorithm to suggest optimal inventory depending on demand and supply, that solution led to INR 2 Crore revenue uplift realization
- Delivered recommendations for optimal sourcing strategies, enhancing alignment between dispatch and sales demand reducing inventory carrying cost.

CUSTOMER INTELLIGENCE

- Developed Customer Segmentation Model using classification ML algorithm to segment customers into three categories high, medium & low based on their buying frequency and deal volume.
- Developed customer churn prediction model to identify the potential churners in order to aid business in designing retention strategies to aid business in saving opportunity revenue loss of approx 17 Crore in upcoming year.
